*The stand-by time and the talk time depend on the network condition, on the SIM card, on the use of backlighting and on the battery status.

** The highest SAR value for his telephone model when use with ear plugs, according to the manufacturer.
The SAR, which is expressed in W/Kg, quantifies the exposure to electromagnetic waves and can be use to check that the mobile complies with the European regulations that require SAR remain below 2W/Kg.

*** Subject to having a 3G compatible package located in a zone with 3G coverage.
